

Introducing Multi-Clinch™

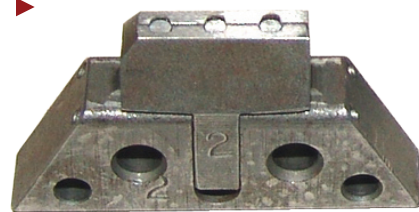

A Multi-Clinch two joint die like the example shown here clinched the dissimilar metal electrical component shown above.

Multi-Clinch has been utilized in complex joining applications where the amount of space available to make a joint is limited.

Multi-Clinch tooling allows the creation of two or more close-proximity Tog-L-loc® joints simultaneously within a single die.

A custom Multi-Clinch three joint die like the example shown here clinched the automotive window trim section shown above.
