Multi-Clinch® has been utilized in complex joining applications where the amount of space available to make a joint is limited.

Multi-Clinch® tooling allows the creation of two or more close-proximity Tog-L-Loc® joints simultaneously within a single die.

A custom Multi-Clinch® three joint die like the example shown here clinched the automotive window trim section shown above.

A Multi-Clinch® two joint die like the example shown here clinched the dissimilar metal electrical component shown above.
